BEAVER POND T8 R5, Aroostook County U.S.G.S. Umcolcus Lake, Maine (7 1/2')

FISHES

Minnows Golden shiner Blacknose dace Creek chub

Redbelly dace

White sucker

Finescale dace Fathead minnow

Hornpout (Bullhead)
Banded killifish

Physical Characteristics

Area - 72 acres

Temperatures 3 feet - 83°F

Maximum depth - 4 feet

Principal fishery: Baitfish

Beaver Pond is a shallow, silt-bottomed pond nearly surrounded by a wide margin of heath. Coldwater gamefish habitat is severly limited by very acidic water and high temperatures during the summer. Several small, spring-fed trickles entering the pond do not modify the temperature appreciably.

Baitfish species are abundant in Beaver Pond.

Surveyed - July, 1970

(Revised - 1994)

Maine Department of Inland Fisheries and Wildlife

Funded in part by Federal Aid in Fish Restoration Act under Federal Project F-28-P
