Hornpout (bullhead)	Common shiner
White sucker	Redbelly dace
Minnows	Lake chub
Fallfish (chub)	Threespine stickleback
Creek chub	Freshwater sculpin

Physical Characteristics

Area — 90 acres

Temperatures

Maximum depth — 30 feet

Surface — 70° F.
30 feet — 64° F.

Principal fishery: Salmon, Brook trout

Round Pond, which is located on Fish River below Fish Lake, provides marginal cold water game fish habitat. The pond is surrounded by softwood forest and the shoreline is largely undeveloped. The pond is shallow and warm except for a narrow channel through which the river flows. The remainder of the pond supports large numbers of warm water fish which compete with salmon and trout. In spite of its limitations, a seasonal salmon and brook trout fishery exists at Round Pond during the spring.

Fish River, between Fish Lake and Round Pond, has good spawning and nursery areas, and is probably used by fish from both bodies of water. A major logging road crosses Fish River between Round Pond and Upper Fish River Falls.
