

SOUTH LITTLE BLACK POND T15 R9, Aroostook Co.

U.S.G.S. Deboullie Pond, Maine (7 1/2')

Fishes

Brook trout

Minnows

Physical Characteristics

Area - 7 acres Average depth - 5 feet Maximum depth - 8 feet Temperatures: Surface - 70⁰F 6 feet - 70⁰F

Principal fishery: Brook trout

South Little Black Pond was found barren of fish species when initially surveyed. Brook trout habitat is limited because of the general shallowness of the pond and apparent lack of spring seeps.

The initial brook trout stocking occurred in 1959. The lack of spawning habitat within the pond or in the outlet provides little if any natural reproduction.

Conservative fishing regulations have been implemented to maintain and enhance the sport fishery.

South Little Black Pond is one of many ponds situated in close proximity in T15 R9, a township owned by the State of Maine. Access to the pond is via a 1-mile hike over an unimproved road from Deboullie Lake. Two-wheel drive access to Deboullie Lake is available over improved gravel roads, however, it is necessary to ford the Red River.

Surveyed - August 1954 (Revised - 1990, 2001) Maine Department of Inland Fisheries and Wildlife Funded in part by Federal Aid in Fish Restoration Act under Federal Project F-28-P
