Golden shiner	

Physical Characteristics

Area - 169 acres	Temperatures
	Surface - 72° F
Maximum depth - 10 feet	8 feet - 72° F

Principal fisheries: Largemouth bass,
chain pickerel

Cross Pond is a picturesque body of water located in eastern Waldo County. An extensive bog system is associated with this shallow pond, making it an interesting place for wildlife and plant enthusiasts. Small boats and canoes can be launched at an unimproved site off the Cross Road.

Cross Pond has habitat suitable for largemouth bass. Largemouths were recently introduced by Department biologists. Chain pickerel are also present and provide good action for both summer and winter anglers.

Anglers are urged to assist the Department in evaluating the recent bass

introduction by reporting their catches to the regional fishery biologist or the local Game Warden. Reports should be submitted to: Maine Dept. of Inland Fisheries and Wildlife, RFD #1, Box 6378, Waterville, ME 04901 (Phone - 547-4161).

Surveyed - August, 1941
(Revised - 1953, 1992) Maine Department of
Inland Fisheries and Wildlife. Funded in
part by Federal Aid in Fish Restoration Act
under Federal Project F-28-P.
