

Exhibit F

Letters Confirming Availability of Needed Services

TransCanada has provided project information to local and state officials asking for review with regard to the anticipated need for local services associated with the Kibby Wind Power Project. The project will provide substantial local benefits with minimal demand on local infrastructure and services. A copy of the letters requesting confirmation of the availability of needed services is attached, and their responses will be filed at a later date.

Subject: TransCanada Maine Wind Development, Inc./Kibby Wind Power Project

Dear Board of Commissioners:

As you know, TransCanada is proposing the development of a 132 MW wind power project on Kibby Range and Kibby Mountain in the unorganized Kibby and Skinner townships. We are excited about this significant project and the many economic and environmental benefits that it will generate in Franklin County and beyond.

As part of its review of a rezoning application, the Land Use Regulation Commission requires that county officials provide letters confirming the availability of needed services. In addition, LURC requires a statement by the County Commissioners evaluating the impact of the proposed rezoning. A map identifying the site and a summary of the project is included for your reference. In addition, a complete copy of TransCanada's application to the Land Use Regulation Commission is available for review in the County Commissioners' office.

The Kibby Wind Power Project will consist of 44 turbines along two ridgelines, a transmission line, a substation and a service building. It will generate approximately 357 million kilowatt hours of clean, renewable electricity, enough to power 50,000 households. In addition, it will displace emissions of harmful pollutants, including approximately 200,000 tons per year of CO₂, the equivalent of removing about 35,000 cars from the road. In addition to its obvious environmental benefits, the Kibby Wind Power project will also make a much needed economic contribution to Franklin County and the people who live and work in the vicinity of Skinner and Kibby townships. For example, construction of the project will involve up to 250 workers, many of whom will be drawn from the region. Operation of the project will require approximately ten permanent employees. The direct and indirect economic benefits of construction and operation of the project will be significant and are summarized in Section 9.2 of the application. Finally, TransCanada will likely be one of if not the largest single taxpayer in Franklin County and will contribute significantly through payment of such taxes.

At the same time, the Kibby Wind Power Project will place minimal if any demand on local or county services. The project is reasonably self-sufficient and will not require unique fire, police, sheriff

or other County services. For example, the minimal water and septic requirements to accommodate approximately ten employees during operation of the facility will be met through on-site resources. Similarly, solid waste will be managed and disposed of by commercial trash haulers and will not require any County services. TransCanada will coordinate with MDOT, Maine State Police and others to ensure that construction traffic is managed with minimal disturbance to other roadway users. In short, the Kibby Wind Power Project will provide a significant environmental and economic benefit to the local community and Franklin County, without imposing any significant demand on local or county services.

We look forward to providing a more complete briefing to the Commissioners at a meeting in the near future, and will arrange an appropriate time to do so. Thank you in advance for your attention to this matter, and we look forward to talking further.

Sincerely,

A handwritten signature in black ink, appearing to read "Nick Di Domenico". The signature is fluid and cursive, with a large, sweeping flourish at the end.

Subject: *TransCanada Maine Wind Development, Inc./Kibby Wind Power Project*

Dear Mr. Giffen:

As you may know, TransCanada is proposing the development of a 132 MW wind power project on Kibby Range and Kibby Mountain in the unorganized Kibby and Skinner townships. We are excited about this significant project and the many economic and environmental benefits that it will generate in Franklin County and beyond.

As part of its review of a rezoning application, the Land Use Regulation Commission requires that county officials provide letters confirming the availability of needed services. As the primary response entity for fire emergencies in this area, we are requesting that you confirm that fire protection services will be available to the Kibby Wind Power project. A map identifying the site and a summary of the project is included for your reference. In addition, a complete copy of TransCanada's application to the Land Use Regulation Commission is available for review at the Franklin County Commissioners' office.

The Kibby Wind Power Project will consist of 44 turbines along two ridgelines, a transmission line, a substation and a service building. The project will be reasonably self-sufficient, with little, if any, impact on any municipal or county services. There will be ten permanent employees associated with the operation of the wind turbines, hired mostly from the local area. The facility does not present any unique fire risks and therefore any need for fire protection services is expected to be minimal and would be consistent with the services currently provided in the region. Although there will be more people on site during the construction phase, any associated need for fire protection during that period would be temporary and is not expected to overburden county services. In addition please note that as a \$250 million project, the Kibby Wind Power project will likely be one of the largest taxpayers in Franklin County.

TransCanada appreciates your cooperation and time in reviewing the enclosed materials and confirming that the project will not require any specialized services from your department. I will contact you in the near future to see if you have any questions or need any additional information. In the meantime, thank you in advance for your attention to this matter, and I look forward to talking to you further.

Sincerely,

A handwritten signature in black ink, appearing to read "Nick Di Domenico". The signature is fluid and cursive, with a large loop at the end.

Subject: *TransCanada Maine Wind Development, Inc./Kibby Wind Power Project*

Dear Sheriff Pike:

As you may know, TransCanada is proposing the development of a 132 MW wind power project on Kibby Range and Kibby Mountain in the unorganized Kibby and Skinner townships. We are excited about this significant project and the many economic and environmental benefits that it will generate in Franklin County and beyond.

As part of its review of a rezoning application, the Land Use Regulation Commission requires that county officials provide letters confirming the availability of needed services. As the primary response entity for police emergencies in this area, we are requesting that you confirm that police protection will be available to the Kibby Wind Power project. A map identifying the site and a summary of the project is included for your reference. In addition, a complete copy of TransCanada's application to the Land Use Regulation Commission is available for review at the Franklin County Commissioners' office.

The Kibby Wind Power Project will consist of 44 turbines along two ridgelines, a transmission line, a substation and a service building. The project will be reasonably self-sufficient, with little, if any, impact on any municipal or county services. There will be ten permanent employees associated with the operation of the wind turbines, hired mostly from the local area. The facility does not present any unique safety risks and therefore any need for police services is expected to be minimal and would be consistent with the services currently provided in the region. Although there will be more people on site during the construction phase, any associated need for services during that period would be temporary and is not expected to overburden county services. In addition please note that as a \$250 million project, the Kibby Wind Power project will likely be one of the largest taxpayers in Franklin County.

TransCanada appreciates your cooperation and time in reviewing the enclosed materials and confirming that police protection services are available and will require no special circumstances or conditions prior to the provision of such services. I will contact you in the near future to see if you have

any questions or need any additional information. In the meantime, thank you in advance for your attention to this matter, and I look forward to talking to you further.

Sincerely,
