

DATA LINKS

Please follow the link listed below, for comprehensive planning data relevant to the following topic area:

- **Drinking Water**

1) [Public Water Resources Information System](#)

This Department of Health and Human Services website is designed to assist planners, developers, and regulators who have a need to know the location of areas that are used as public water supplies. Data provided are:

- Supply owners' contact information
- Supply protection areas
- Potential and actual sources of contamination (see EGAD, below)
- Conserved lands, and
- Land conservation group service areas.

No water quality or water system operational data are available on the site.

2) [Environmental and Geographic Analysis Database](#) (EGAD)

This Department of Environmental Protection website is designed to store sampling site and water quality information for potential and actual sources of contamination to groundwater and surface water. It includes a broad range of data types including physical, chemical, biological and spatial.

NOTES:

In cases where no Source Water Assessment is available, these sites can be a source of additional information on a particular public water system.

Google Earth is required to view and download maps from these sites.

Questions about these websites and the data they contain should be directed to:
