

Section 16. WATER SUPPLY

16.1. WATER SUPPLY REQUIREMENTS

The proposed Project will not require water supply for the operation of the turbines or electrical infrastructure. The Operations and Maintenance building has been designed for a lot that has an existing well that serviced a restaurant and will support the needs of the new facility.

16.2. CONSTRUCTION WATER SUPPLY

During construction, bottled drinking water will be made available for the support of construction personnel. An existing well on site at the proposed laydown yard facility will provide water for dust abatement. This can be supplemented by surface water withdrawals from area ponds, which, if necessary, will be conducted in accordance with the requirements of 38 M.R.S. § 470-B¹³ and pond water level regulations in 06-096 CMR Chapter 587.¹⁴
