

I am just an ordinary citizen living in Belfast, ME.

I am deeply concerned about Nordic doing their project.

It just doesn't seem like we have enough science type information.

How can they start such a large project with such little information?

I don't buy a car unless they tell me how many gallons of gas will be used and stuff like that.

So, I worry what could happen since Nordic say things like they don't know what kind of food they will use.

Thank you for your everything you do to protect us.
