

## 21.0 AIR EMISSIONS

Minor temporary impacts to air quality may take place during Project construction due to possible vehicular road dust, smoke from potential stump burning (see Section 18 Solid Waste), and exhaust from timbering, rock-removal and pile-driving equipment (see Section 1 Project Description). These potential impacts will be de minimus in scope and will be consistent with land management activity currently taking place at the site.

Operation of the Project will not result in air emissions.
