TO: Maine Immunization Program ImmPact Users
FROM: Maine Immunization Program
SUBJECT: NEW ImmPact Functionality – AFIX Product
DATE: August 30, 2019

The Maine Immunization Program is pleased to announce a new function of the Maine IIS, ImmPact, called the AFIX Product. The AFIX Product has been developed to allow ImmPact to perform provider level immunization rate assessments. These assessments are a key part of the Immunization Quality Improvement for Providers (IQIP), an initiative that aims to provide continuous quality improvement measures to help providers strive for and achieve higher immunization rates, as well as improve immunization practices.

The AFIX Product replaces immunization coverage rate reports. These reports can be run for any age group, any selection of vaccine antigens, and for a variety of pre-selected immunization series. The AFIX Product calculates immunization rates in real-time, creates charts and tables, missed opportunities reports, missing immunizations reports, patient listings, invalid doses, and a report card.

The AFIX product will be available the week of September 16th, 2019. An announcement will be posted in ImmPact once this functionality is live.

You are invited to join Clara Alvarez, IQIP Coordinator at the Maine Immunization Program for an “AFIX Product” webinar. This webinar will provide training on how to generate different reports and how this information will be useful for your facility.
