

Health in Maine: Race

The Maine Shared Community Health Needs Assessment (Maine Shared CHNA) highlights populations and geographies that experience disparate health and well-being outcomes due to social and institutional inequities. These disparities are documented through a community engagement process and the health equity data profiles.

For data in the health equity profiles, there are several factors currently limiting what is included:

- Not all data sources collect sufficient data elements for all populations of interest.
- Some populations and geographies in Maine are numerically small, resulting in data that is less reliable due to low numbers, unavailable due to suppression and/or privacy concerns, and/or missing entirely.
- Some health equity profiles may include fewer indicators than others and what appears in the County Data Profiles, given data availability, suppressed data rates, and what is and is not collected at the state and national level.
- Disparities are generally only analyzed at the state level for more reliable estimates with less suppression. However, this assumes disparities found at the state level have similar patterns for smaller geographical areas, which do not account for unique characteristics of population throughout the state.
- The data sets used by the Maine Share CHNA follow federal reporting guidelines for race, ethnicity, sexual orientation, and gender identity, which may not encompass nor resonate with everyone. Thus, some people may not see their identity in the health equity profiles.

Many data analyses group people who report they have two or more races into one category. This results in a grouping that is very diverse and with a range of lived experiences. In addition, the option of “other race,” if provided, is not always reported and is not presented in these tables. To try to account for some of these gaps and complement the quantitative data, the Maine Shared CHNA engaged in an extensive community engagement process. That process and the results are outlined in the Community Engagement Overviews. Additional information on data commitments, how data is selected, data limitations, and data sources and definitions can be found in the data profiles for each County.

Population (Maine 2022)	
American Indian or Alaska Native	25,539
Asian	25,566
Black or African American	35,473
Native Hawaiian or Other Pacific Islander	1,459
Two or More Races	72,552
White	1,329,331

How to Read This Document

The following symbols are used in the tables to note when data may be too small for statistical reliability and suppressed due to a small number of responses and when data is pending (available at a later date) or unavailable.

Symbols	
*	means results may be statistically unreliable due to small numbers, use caution when interpreting.
~	means suppressed data due to a small number of respondents.
^	means data is pending.
—	means data is unavailable.

The Maine Shared Community Health Needs Assessment (Maine Shared CHNA) is a collaborative partnership between Central Maine Healthcare, Northern Light Health, MaineGeneral Health, MaineHealth, the Maine Center for Disease Control and Prevention, and the Maine Community Action Partnership. By engaging and learning from people and communities and through data analysis, the partnership aims to improve the health and well-being of all people living in Maine. This is the fifth collaborative Maine Shared CHNA.

The mission of the Maine Shared CHNA is to:

- Create shared CHNA reports,
- Engage and activate communities, and
- Support data-driven improvements in health and well-being for all people living in Maine.

These data profiles, as well as additional information and data, can be found online at the Maine Shared CHNA’s website – www.mainechna.org.
