Paul Josephson, Maine BRFSS Coordinator  
Maine Center for Disease Control and Prevention

This data dictionary has been prepared as part of the Catherine Cutler Institute's contract with the Maine Center for Disease Control and Prevention, Department of Health and Human Services, with support from federal grant 1U58SO 000009-02 provided by the Centers for Disease Control and Prevention, Atlanta, Georgia.

Note: The Maine BRFSS Data Dictionary is occasionally updated during the year to capture corrections. Updates are posted to the Maine BRFSS web page: <http://www.maine.gov/dhhs/mecdc/public-health-systems/data-research/brfss/index.shtml>

**Maine Behavioral Risk Factor Surveillance System  
Data Dictionary 2001 to 2022**

**Table of Contents**

Overview of the Maine BRFSS Data Dictionary.....i  
 Working with Maine BRFSS Split Sample Years.....vii  
 Scoring Algorithms for BRFSS Mental Health Questions.....xiii

# Maine Behavioral Risk Factor Surveillance System Data Dictionary 2001 - 2022

## Overview of the Maine BRFSS Data Dictionary

### Introduction

The Maine BRFSS Data Dictionary was created to help users better understand and accurately produce estimates from the Maine BRFSS multi-year database. For Maine CDC users this database is available on the Maine CDC internal "M" drive or from the Maine BRFSS Coordinator.

A PDF version of the Data Dictionary is available on the M drive and at: <http://www.maine.gov/dhhs/mecdc/public-health-systems/data-research/brfss>. The PDF file allows users to search for individual words and to browse topics via the Table of Contents.

### Data Collection and Cleaning Process

The BRFSS surveys target non-institutional adults aged 18 and over and are fielded almost daily throughout the year. From BRFSS surveys conducted by each state (or its contractors), data are submitted monthly to national CDC where the monthly data are collated and cleaned. In the summer of each year, national CDC sends a cumulative annual data file back to each state with BRFSS data from the previous calendar year. National CDC provides some helpful reports and documentation along with the annual data file; however, no documentation is made available for state added questions. The state added question responses are combined into one variable labeled STATEQUE in the file provided by the national CDC. Each state must separate out and clean state-added variables independently.

Maine takes the annual data file from the national CDC, separates and cleans the state-added variables for that year, and then merges the one-year file with the existing multi-year database that includes BRFSS data extending back to 2001. The Maine BRFSS database is updated, cleaned and re-released each spring of the following year. This

Data Dictionary is then updated to reflect any changes in the survey questionnaires and multi-year database.

Note that in the process of cleaning and standardizing the annual data from the national CDC for the multi-year database, some variable names are changed to match similar questions from different years and facilitate trend analysis.

### **Quick Tips for Data Dictionary Users**

- The Data Year and Part column lists the survey year (and part of the survey, if applicable) where data exist for each variable. If a year is not listed, it indicates the variable has no data for that year (i.e. the question was not asked)
- The most recent year (2022) is shaded in the Data Year and Part column throughout.
- Variables are organized by topic (e.g. Asthma) and by type. Within each topic area, variables from Core questions appear first, followed by Module questions, State Added questions, and Calculated Variables.
- Description, code value and user information are left blank when the information cannot be found in original documentation provided by the national CDC.
- New variables created by combining two or more variables are identified by \_C at the end of the name of the combined variables.
- State added questions variable names are in the format xxx\_xxxx i.e. three characters\_four characters. Examples include: SMK\_QUIT and DNT\_ADVC.

## **Maine Behavioral Risk Factor Surveillance System Data Dictionary 2001 - 2022**

### Survey Instrument for 2022

A PDF version of the 2022 Maine BRFSS Survey Instrument (Questionnaire) is available at the Maine BRFSS Website <http://www.maine.gov/dhhs/mecdc/public-health-systems/data-research/brfss/questionnaires.shtml>.

### Brief History of the Maine BRFSS Survey, Database and Data Dictionary

The BRFSS survey started in Maine in 1987. For unknown reasons, these early data are not included in the multi-year database or in this Data Dictionary. In 2000, the multi-year database and Data Dictionary were first created. That year, Maine BRFSS conducted both an in-house 2,000 sample survey and an additional contractor oversample of 2,500 surveys of ten counties by Macro International Inc. The purpose of the oversample was to obtain enough data for county level analysis. It was discovered that the survey questionnaire for state-added questions used by in-house interviewers in 2000 was not exactly the same as the one used by the contractor for the oversample. As a result, data for 2000 were dropped from the multi-year database which now includes data extending back to 2001.

To provide adequate sample sizes for smaller geographically defined populations of interest, Maine samples disproportionately from strata that correspond to sub-state regions for both landline and cellphone samples.

In 2007, Maine BRFSS began a partnership with Maine's Tobacco Free Program for a split-sample survey. In this split survey the "Core" (the required national survey) is the same for each survey but the optional part of the surveys are different, and are called Part A and Part B. This change allowed for additional questions to be included in the survey and helped the Tobacco Program

get data that was formerly collected as part of the Adult Tobacco Survey. National CDC supplies the state with weighting variables needed to estimate prevalence using questions from Part A, from Part B, and questions that are included in both parts. For years 2012-2022, landline and cell phone respondents were both part of the split sample. (See the next section for information on how to use the split sample for analysis.)

Also implemented in 2007, Maine began issuing advance letters to individuals selected as part of the "list assisted" sample. (This process was piloted in 2004). Approximately 30% of those in Maine's BRFSS sample receive an advance letter, and 45% of participating respondents recall receiving an advanced letter.

## Maine Behavioral Risk Factor Surveillance System Data Dictionary 2001 - 2022

In 2008, national CDC started including household and child weighting variables in their annual distribution to the states. While the BRFSS is a non-institutional adult survey, in a few instances household and child health data are available in the database. In such cases, the appropriate household or child weights should be used. (More information on the child and household weighting variables are available in the Key Variables table below).

Maine BRFSS implemented several measures in 2009 designed to maintain or improve response rates. First, a Maine-based caller identification ("MaineCDC BRFSS") was assigned. Second, the protocol for contacting prospective respondents was altered. After the first call with no response, interviewers would leave a message identifying themselves as BRFSS interviewers and saying they would call back. Maine BRFSS follows the national guidelines for the number of calls to each number and how refusals are handled.

Maine BRFSS Split Sample Landline and Cell Phone Sizes by Year

Year	Total	Part A	Part A Landline	Part A Cell	Part B	Part B Landline	Part B Cell	Part C	Core	Cell
2004	3,530	*	*	*	*	*	*	*	*	*
2005	3,960	*	*	*	*	*	*	*	*	*
2006	4,040	*	*	*	*	*	*	*	*	*
2007	6,830	4,182	*	*	2,648	*	*	*	*	*

2022	10,646	5,139	*	*	5,344	*	*	*	163	*

\* Not applicable for the survey year

## Maine Behavioral Risk Factor Surveillance System Data Dictionary 2001 - 2022

### Trend Analysis

Note that the CDC advises against comparing results after 2010 with results from previous years, since apparent changes in prevalence could be due to the change in weighting and sampling methodology rather than in the underlying prevalence.

### Methodological Changes to the BRFSS

Two important methodological changes to the BRFSS surveys were implemented beginning in 2011 and continued through 2014: 1) A cell phone sample was added to the sampling and data collection process; and 2) raking procedures were used to weight the data. Starting in 2015, the landline and cellphone sample were combined.

In 2011, about 10% of total completes were conducted via a cell phone interview. The national CDC increased the proportion of cell phone completes to approximately 20% in 2012. The cell phone sample was treated as a sixth stratum and was not defined by geography. Individuals in the 2011 - 2012 cell phone samples can live in any county in Maine (unlike those in the five other strata that are defined by county). Beginning 2013, cellular telephone stratification is conducted by the BRFSS, although geographic specificity is less reliable for cellular telephone numbers than for landline numbers.

The CDC implemented the cell phone sample and raking weighting procedures to "keep the data accurate and representative of the total population." The CDC points out that an estimated 3 in 10 U.S. households have only cell phones, and that people living in cell-only households are younger on average, rent instead of owning their homes, and tend to be unmarried - all characteristics that are also linked with behaviors such as drinking and smoking. The new raking weighting procedure is an improvement over the former method (called "post-stratification") because it allows for

more precise adjustments to the weighting process, including adjustments for a larger number of demographic variables such as education level, marital status, and home ownership. This reduces the potential for bias and increases the representativeness of BRFSS estimates.

The CDC published an MMWR report and several additional documents describing the 2011 changes to the BRFSS methodology and the implications for surveillance. These documents are available at:

<http://www.cdc.gov/surveillancepractice/reports/brfss/brfss.html>

### Maine BRFSS Suppression Guidelines

Maine BRFSS recommends use of the following three suppression guidelines for any Maine BRFSS data analysis that is to be publicly released. The purpose of these guidelines is to avoid the release of estimates that are not statistically reliable.

1. Numerator less than 5
2. Denominator less than 50
3. Confidence Interval more than 20 points wide.

If any of these guidelines are not met for a given cell, the results for that cell should be suppressed (i.e. not reported). In addition, if a category has one or more cells suppressed, the total for that category should also be suppressed. This prevents someone from determining the value of a suppressed cell by subtracting the value of a non-suppressed cell from the category total.

Maine BRFSS recognizes there are occasions when variations from these suppression guidelines are deemed appropriate and makes no attempt to control how knowledgeable users of BRFSS data disseminate their results.

## Maine Behavioral Risk Factor Surveillance System Data Dictionary 2001 - 2022

Maine BRFSS follows the general guidelines of the national CDC, as well as the guidelines of the Maine CDC Privacy Policy and its revisions.

### Key Variables

The Data Dictionary includes information about hundreds of variables that are included in the multi-year database. The following are variables created by Maine BRFSS in the past several years to facilitate analysis.

Variable Name	Description
DISTRICT	Used to get prevalence estimates across Maine's Health Districts
_IMPCTY	Used for county level analysis
YEARPSU	Either the _PSU (Primary Sampling Unit) variable or the YEARPSU variable may be used.
PART	Verifies the part or arm for a given question and its corresponding weight. Applies to split sample years, 2007 - present.
Child weights	Used to construct prevalence estimates based on a randomly selected child under age 18 from each household. Available beginning in 2006. Use _CHILDWT for non-split sample years or when children are included in both Parts A and B, _CHILDQ1 for children in Part A only, and _CHILDQ2 for Part B only. For 2011, use _CLDWTV3. In 2012, use _CLCWTV2 for landline and cell phone questions and _CLDWTV2 for landline only questions. In 2014, use _CLDWTV1 for landline Part A questions and _CLCWTV1 for landline and cell questions in Part A. For 2015-2017, use _CLCWTV1. Starting in 2018 use _CLLCPWT. (The Random Child Selection module appeared in Part A of the 2015 instrument and Part A and B starting in 2017.)
Household weights	Household weight variables used to create household-level estimates. In 2007, national CDC began providing a household weight variable for the Core survey (_HOUSEWT). Maine-created

	<p>household weight variables are currently available for Part A (_HOUSEWT1) and Part B (_HOUSEWT2) for the years 2007 through 2014 in the multi-year database. Beginning in 2015, house weights were renamed due to methodological differences in their calculation. _LCPHHWT, _LCPHHWT1, _LCPHHWT2 for Core, Part A and Part B, respectively. Starting in 2020, Maine's household weight was not produced.</p> <p><b>Use of part A and part B household weights may result in imprecise estimates for some questions. The CDC has advised that the household weight should not be used when the sample includes cellular telephone respondents, which are not included in the household weights.</b></p>

## Maine Behavioral Risk Factor Surveillance System Data Dictionary 2001 - 2022

### Glossary

The following table describes terms used throughout the Data Dictionary.

<b>Term</b>	<b>Definition</b>
<i>Core</i>	Core questions are mandatory survey questions established by the national CDC and comprise approximately the first 90 questions of each year's survey.
<i>Section</i>	Sections are groups of related mandatory (i.e. Core) questions.
<i>Module</i>	Modules are a group of related optional (non-Core) questions developed and made available by the national CDC that can be selected for use by the state. Modules are available for topics such as diabetes, asthma, mental illness, etc.
<i>State added</i>	State added questions are questions selected by the state that are not normally part of any BRFSS Module.
<i>Calculated Variable</i>	A variable calculated by the national CDC or state based on responses to two or more original variables. For example, body mass index (_BMI) is calculated based on height and weight given by the respondent.
<i>Skip Pattern</i>	The organization of the survey questionnaire so that questions are asked only of individuals who fit certain criteria.

# Maine Behavioral Risk Factor Surveillance System Data Dictionary 2001 - 2022

## Working with Maine BRFSS Split Sample Years

Beginning in 2007, the Maine BRFSS partnered with Maine's Partnership for a Tobacco Free Maine Program for a BRFSS split survey. In 2011, the national CDC added a cell phone sample to the BRFSS and used a new method for weighting the data called raking. Accurate analysis of the split sample data requires that the correct weight variable be used.

### Selecting the Correct Weight Variable

The selection of the BRFSS weight variable depends on the survey year, whether the question was collected in a landline or cell phone sample (applies beginning in 2011), and the location of the question in the survey instrument for that year (i.e. in the Core, Part A only, Part B only, Part C only, or all Parts). Use the following guidelines for choosing the weight (summarized in the table in the opposite column). Note that the CDC introduced a new set of weighting variables in 2011, to reflect the changes to the survey methodology.

- Prior to 2007, use `_FINALWT`
- 2007 through 2010:
  - Use `_FINALWT` if the variable is in the Core or if it is in both Parts A and B
  - Use `_FINALQ1` if the variable appears in Part A only, and `_FINALQ2` for Part B
- For 2011:
  - Use `_LLCPWT` if the variable is in the Core, which means it was included in all landline surveys **and** in the cell phone survey
  - Use `_LANDWT` if the variable is included in all three landline surveys, but **not** in the cell
  - Use `_LNDWTV1` if the variable is in the Part A landline survey only, `_LNDWTV2` for Part B, and `_LNDWTV3` for Part C.
- For 2012 through 2014:
  - Use `_LLCPWT` if the variable is in the Core, which means it was included in all landline surveys **and** in the cell phone survey
  - Use `_LANDWT` if the variable is included in all three landline surveys, but **not** in the cell
  - Use `_LNDWTV1` if the variable is in the Part A landline survey only, `_LNDWTV2` for Part B.
  - Use `_LCPWTV1` if the variable is in the Part A cell phone survey or the Part A landline and cell phone survey, `_LCPWTV2` for Part B.
- For 2015 - 2022:
  - Use `_LLCPWT` if the variable is in the Core, which means it was included in all landline surveys **and** in the cell phone survey.
  - Use `_LCPWTV1` if the variable is in the Part A survey, `_LCPWTV2` for Part B.
- In addition, for 2022:
  - Due to a skip pattern error, the state-added questions listed below contain only a partial year of data and require the following weight variables.
  - 2022 data for these questions should **only** be used for state-level analyses.
  - Use `_LLCPWT_1` for variables in both Parts A and B (`ADANXEV_PY`, `ADDOWN_PY`, `ADPLEASR_PY`, `ATM_SUCD_PY`, `BPHIGH3_PY`, `CHOLMED4_PY`, `CMT_SUCD_PY`, `LFE_GMBL_PY`, `MISTMNT_PY`, `NUSE_DRUG_PY`, `PRB_GMBL_PY`, `RDN_FIXD_PY`, `RDN_LEVL_PY`, `RDN_TEST_PY`, `RDN_WATR_PY`, `TOLDHI_C2_PY`, `TST_ARSN_PY`, `WAT_TEST_PY`, `WAT_WELL_PY`)
  - Use `_LCPWTV1_1` for variables in Part A only (`AIR_COND_PY`, `CMX_DETC_PY`, `NFRG_SFTY_PY`, `SEX_VLNC_PY`, `SVEHDSE1_PY`, `SVHDSX12_PY`, `SVSAFE_PY`, `SVSEXTCH_PY`, `TYP_COND2_PY`)

## Maine Behavioral Risk Factor Surveillance System Data Dictionary 2001 - 2022

### Guideline for Selection of BRFSS Weight Variable

BRFSS Year	Question/Variable Location						
	Part A LL Only	Part A Cell Or Part A LL and Cell	Part B LL Only	Part B Cell Or Part B LL and Cell	Part C LL Only	All Landline	All LL and Cell (Core)
2001 - 2006	*	*	*	*	*	_FINALWT	*
2007 - 2010	_FINALQ1	*	_FINALQ2	*	*	_FINALWT	*
2011	_LNDWTV1	*	_LNDWTV2	*	_LNDWTV3	_LANDWT	_LLCPWT
2012 - 2014	_LNDWTV1	_LCPWTV1	_LNDWTV2	_LCPWTV2	*	_LANDWT	_LLCPWT
2015 - 2022	*	_LCPWTV1	*	_LCPWTV2	*	*	_LLCPWT
partial year SAQ	*	_LCPWTV1_1	*	*	*	*	_LLCPWT_1

\* Not applicable for the year

The PART variable is an indicator for whether a respondent was included in the Part A or Part B arm of the BRFSS survey for the split sample years 2007 through 2010, and whether a respondent was included in the Part A, Part B, Part C, or the Cell phone survey in 2011. Note that in years 2012 through 2021, there was no Part C; moreover, parts A and B each have landline and cell phone categories. In 2015-2022, the land and cellphone categories were combined.

The following SAS output shows the frequency of the PART variable for 2010 through 2022.

#### SAS Output: Table of Year by Part Variable

By running a simple crosstab between PART and the variable you want to analyze for each survey year, you can easily verify whether the question was included in Parts A, B, C and/or the cell phone survey. Use the following guidelines:

To determine which part or arm of the survey question(s) were run, follow these three steps:

1. Check for inclusion of the question in the individual survey questionnaires by clicking on "Yearly Questionnaires" on the Maine BRFSS website (hyperlink referenced on pp. ii).
2. Check Maine's Data Dictionary for information about the question. The "Data Year and Part" column specifies the year and part of the survey that each question was included.
3. Verify any preliminary determination of what part or arm of the survey and what final weight to use by running a crosstab of each variable you plan to use in your analysis with the PART and YEAR variables. (See explanation on the next page.)

Using the PART Variable to Identify Questions from Different Survey Arms

Year (YEAR) Frequency	A/Land Cell A	Cell A Only/ A Cell	Land A Only/ A Landline	B/Land Cell	Cell B Only/ B Cell	Land B Only/ B Landline	Core	C	Cell	Total
2010	4060	0	0	4072	0	0	0	0	0	8132

## Maine Behavioral Risk Factor Surveillance System Data Dictionary 2001 - 2022

### In years 2012-2022:

Survey Part/Arm	Verify using frequencies:
Not included	All responses are missing for all five categories (Land A Only, Land B Only, Cell A Only, Cell B Only, and Cell Part Unknown)
Core or in all landline and cell parts	Valid (non-missing) responses appear in the following five categories: Core, Land A, Land B, Cell A, Cell B
Core Landline or Land_A_Only and Land_B_Only	Valid landline responses appear in both part A and B landline categories. Other categories have missing values.
Cell A and Landline A	Valid landline and cell phone responses appear in the part A category. Other categories have missing values. <b>(Use similar process to identify part Cell B and Landline B respondents.)</b>
Landline A	Valid responses appear for part A landline respondents only. Other categories have missing values. <b>(Use similar process to identify part Landline B respondents.)</b>

### Prior to 2012:

Survey Part/Arm	Verify using frequencies:
Not included	All responses are missing for all four categories (A, B, C, and Cell).
Core or Parts A, B, C and Cell	Valid (non-missing) responses appear in all four categories.
Part A only	Valid responses appear for Part A respondents only. (All other categories have only missing values.) Use similar process to identify Part B only, or Part C only respondents.

Example: The following shows SAS output for the variable ADDEPEV by PART, for the survey years 2008- 2011 and ADDEPEV2 by PART for the survey year 2012 and 2013.

YEAR=2008

ADDEPEV(EVER TOLD YOU HAD A DEPRESSIVE DISORDER)

7	7	7	0	0	14
9	3	11	0	0	14
Total	4060	4072	0	0	8132

YEAR = 2011

## Maine Behavioral Risk Factor Surveillance System Data Dictionary 2001 - 2022

ADDEPEV(EVER TOLD YOU HAD A DEPRESSIVE DISORDER)

PART						
Frequency	A	B	C	Cell	Total	
.	0	0	0	2	2	
1	898	956	948	331	3133	
2	3079	3042	3090	835	10046	
7	19	10	18	5	52	
9	2	3	5	0	10	
Total	3998	4011	4061	1173	13243	

**YEAR = 2012**

ADDEPEV2(EVER TOLD YOU HAD A DEPRESSIVE DISORDER)

PART						
Frequency		A-Cell	A-Landline	B-Cell	B-Landline	Total
1	10	242	832	241	880	2205
2	35	656	3162	692	3134	7679
7	0	1	16	3	8	28
9	0	1	4	0	4	9
Total	45	900	4014	936	4026	9921

**YEAR = 2013**

ADDEPEV2(EVER TOLD YOU HAD A DEPRESSIVE DISORDER)

PART						
Frequency	Cell_A_Only	Cell_B_Only	Core	Land_A_Only	Land_B_Only	Total
1	241	162	9	907	551	1870
2	714	427	45	3040	1974	6200
7	5	0	0	10	4	19
9	0	0	0	0	5	8
Total	960	589	54	3962	2532	8097

Explanation: For the year 2008, only respondents from Part A have results that are valid (1, 2, 7 or 9) for the variable ADDEPEV. All 2,697 respondents in Part B are missing responses for ADDEPEV. The results show that ADDEPEV was included only in Part A of the 2008 BRFSS survey, so the variable \_FINALQ1 should be used to weight the results for that year.

In 2009 and 2010, ADDEPEV has valid responses for both Part A and Part B respondents, indicating that ADDEPEV was included in both parts of the survey for those two years. For 2009 and 2010, the data should be weighted with \_FINALWT.

(Note: The Part C and Cell categories have no valid values for 2008 through 2010 because there was no Part C or cell phone survey included in those years.)

In 2011, ADDEPEV has valid responses for respondents in all three landline arms of the survey (Parts A, B and C), as well as those in the cell phone survey. For 2011, the data should be weighted with \_LLCPWT.

In 2012 and 2013, ADDEPEV2 has valid responses for both arms of the survey including landline and cellphone. Thus, this is a Core question and the variable \_LLCPWT should be used as the weight. Please note the following example:

```
proc surveyfreq data=me17brfss;
    table ADDEPEV2 /row cl;
    strata _STSTR; cluster _PSU;
    weight _LLCPWT; /* 2013 Combined LL/Cell Weight */
run;
```

Example 2: The following shows SAS output for the variable ADANXEV (ever told anxiety) for the survey years 2012 and 2013.

**YEAR = 2012**

ADANXEV(EVER TOLD YOU HAD AN ANXIETY DISORDER)

## Maine Behavioral Risk Factor Surveillance System Data Dictionary 2001 - 2022

Frequency	PART					Total
		A-Cell	A-Landline	B-Cell	B-Landline	
.	45	900	92	936	97	2070
1	0	0	654	0	621	1275
2	0	0	3246	0	3288	6534
7	0	0	15	0	13	28
9	0	0	7	0	7	14
Total	45	900	4014	936	4026	9921

### YEAR = 2013

ADANXEV(EVER TOLD YOU HAD AN ANXIETY DISORDER)

Frequency	PART					Total
	Cell_A_Only	Cell_B_Only	Core	Land_A_Only	Land_B_Only	
1	170	134	0	613	396	1313
2	692	392	0	3137	2010	6231
7	1	1	0	8	4	14
9	0	1	0	6	3	10
Total	863	528	0	3764	2413	7568

Explanation: For the year 2012, respondents from both Part A and B landline surveys have results that are valid for the variable ADANXEV. Notice that Part A of the cell phone survey has 900 respondents that are missing, while Part B of the cell phone survey has 936 respondents with missing data. The results indicate that ADANXEV was included in the landline, but not in the cell phone survey. The 2012 data for ADANXEV should therefore be weighted with `_LANDWT`. However, for the year 2013, valid non-missing values occur in cell A and B as well as landline A and B categories; therefore, `_LLCPWT` should be used.

The sample SAS code below could be used with the 2013 BRFSS data to estimate the prevalence of anxiety disorders among Maine adults, along with the appropriate confidence intervals.

```

/*Year 2012*/
proc surveyfreq data = me17brfss;
    table ADANXEV /row cl;
    strata _STSTR;
    cluster _PSU;
    weight _LANDWT;    /* 2012 LL Weight */
run;

```

```

/*Year 2013*/
proc surveyfreq data = me17brfss;
    table ADANXEV /row cl;
    strata _STSTR;
    cluster _PSU;
    weight _LLCPWT;    /* 2013 LL Weight */
run;

```

### Weighting Multiple Years Using SAS

The instructions in this section demonstrate a method of combining BRFSS survey data from different years, which is useful for increasing the sample size in situations where you want to examine sub-state populations.

Because of the change to the BRFSS survey methodology in 2011, data from 2011 and on should not be combined with data from earlier years. However, 2011 data can be combined with years after 2011 data using this method.

The following sample SAS DATA and PROC coding show how you would use the combined 2008 - 2010 data to analyze the ADDEPEV variable, which was in Part A only in 2008, and in Parts A and B in 2009 and 2010.

## Maine Behavioral Risk Factor Surveillance System Data Dictionary 2001 - 2022

```
data mebrfss;
set me0017_m;
if year = 2008 then NEWFINALWT = _FINALQ1; /* Part A */
if year = 2009 then NEWFINALWT = _FINALWT; /* A & B */
if year = 2010 then NEWFINALWT = _FINALWT; /* A & B */
NEWYEAR = YEAR;
run;

proc surveyfreq data =mebrfss;
table ADDEPEV /row cl;
strata NEWYEAR _STSTR;
cluster _PSU;
weight NEWFINALWT;
format ADDEPEV depress.;
run;
```

When you are combining multiple years in a SAS analysis, you need to create a new final weight variable (NEWFINALWT), assigning the correct weight based on the survey year and part.

Also note that you need to create a copy of the YEAR variable (NEWYEAR). The reason behind creating the NEWYEAR variable is to give SAS the correct sampling scheme in situations where data from multiple years are used in the analysis. The standard error, which ultimately is used in the calculation of the confidence interval, is calculated incorrectly if some form of YEAR variable is not used in the strata statement. Also, if the YEAR variable by itself is used in two places (table and strata statements), then SAS will not run the analysis. This method allows SAS to run while still getting the correct standard error for the calculation of confidence intervals.

**Maine Behavioral Risk Factor Surveillance System  
Data Dictionary 2001 - 2022**

## **Scoring Algorithms for BRFSS Mental Health Questions**

The inclusion of mental health data is considered an ongoing priority for the Maine users of BRFSS data. On a larger scale, the integration of mental health and physical health is an important objective of Maine's public health agency and health care delivery programs.

Beginning in 2006 Maine BRFSS (and national CDC) realized the importance of recognizing various mental health conditions as chronic diseases whose data could be captured by BRFSS. Maine uses data primarily from the Anxiety and Depression Module (A&D Module) disseminated by national CDC. This module includes the PHQ-8 which assesses current symptoms of depression, as well as questions about past diagnosis of depression or anxiety disorder. The PHQ-8 is adapted from the PHQ-9 that is used broadly in clinical practice to diagnose and monitor treatment for depression, so it is familiar to providers across Maine's health care system. The PHQ-8 differs only in the omission of the suicide question on the PHQ-9. Data from the PHQ-8 can be analyzed with two scoring algorithms to estimate the prevalence of two similar (but not identical) depression diagnoses (1) moderate to severe depression or (2) major or other depression. These two algorithms are both included here as the first is used more in primary care practice and the other better matches the diagnostic manuals used in mental health settings. Maine has generally preferred the algorithm for diagnosis of moderate to severe depression, given the emphasis in Maine of promoting screening and treatment of depression in primary care.

The first two questions of the PHQ-8 are validated as the PHQ-2, which is regularly used as a screening tool in clinical practice and is also the screen for depression used in Maine CDC's web-based Health Survey, Keep-ME-Well. The A&D Module also included two additional important questions: Ever-told depression and Ever-told Anxiety. In 2007 Maine ran another SAMHSA

mental health Section named Serious Psychological Distress, which was only run once in Maine because it did not inform current clinical practice or public health programming. However, this Module included a helpful question of "Receiving any mental health treatment" which has been used to estimate the gap between clinically significant depression and access to treatment.

In 2010, National CDC 5-year BRFSS plan created a Chronic Disease Section of its Core survey and "Ever-told Depression" was included among other chronic diseases. In addition, the mental health days question of the Healthy Days Section of the Core survey also produces "Frequent Mental Distress (FMD)" when an individual reports 14 or more mentally unhealthy days per month.

Over the years Maine has mixed and matched these questions as funding and interest evolved. Continuing with the 2014 survey, Maine's consensus is to include the Core chronic disease Section, "ever-told depression" (mandatory) the two questions creating the PHQ-2 (the depression screening questions); one question "ever-told anxiety," and one question "receiving any mental health treatment) in Maine's ongoing surveys. This selection of one core (mandatory) and four state added questions allows for data on lifetime anxiety and depression, screening for current symptoms of depression, and data on those receiving treatment.

## Maine Behavioral Risk Factor Surveillance System Data Dictionary 2001 - 2022

The formats and data step algorithms below can be used to code the mental health variables listed in this table.

### BRFSS Mental Health Variables

Variable Name (SAS Format)	Description
NTOTALSCORE (current)	Indicator of moderate to severe depression coded using eight items from the PHQ-8 depression screener.
PHQTWO (phqtwo)	Indicator of current depression coded using the two items from the PHQ-2 depression screener.
NMENTHLTH (fmd)	Frequent Mental Distress, indicates 14 or more mentally unhealthy days per month
MAJDEP (major)	Indicator of major or other depression coded using eight items from the PHQ-8 depression screener
ADDEPEV (everdep)	Variable indicating respondent has ever been told by a doctor or other health care professional that they have depression
ADANXEV (everanx)	Variable indicating respondent has ever been told by a doctor or other health care professional that they have an anxiety disorder
MISTMNT (treatment)	Variable indicating the respondent is now taking medicine or receiving treatment for a mental health condition or emotional problem

```

<b>USENOW3</b>	2009 A B	2010 A B	Do you currently use chewing tobacco, snuff or snus every day, some days, or not at all?	1 = Every day 2 = Some days 3 = Not at all 7 = Don't know/Not sure 9 = Refused	** Note: Due to an error, this question appeared in both the Core and in Part B of the 2009 and 2010 surveys. USENOW3 has responses from the Core (Part A and B) question, and USENOW2 has results from the state added question in Part B only. To obtain prevalence rates for 2009, we recommend using USENOW3 because of the larger sample. For multiple-year comparisons that include 2009 and prior years, it is necessary to combine USENOW3 with USENOW2.
