

YORK DISTRICT PUBLIC HEALTH NEWSLETTER

June 2024

YORK DISTRICT PUBLIC HEALTH UNIT

The Maine CDC York District Public Health Unit includes: District Liaison, Health Inspection Program, Public Health Nursing, Epidemiology, Drinking Water Program and the Public Health Educator.

PUBLIC HEALTH UNIT SPOTLIGHT:

Craig Rothfuss, Field Epidemiologist

Craig has been with Maine CDC's Field Epidemiology team for over 5 years. He particularly loves working with Hepatitis A, *Vibrio*, and Pertussis. A fun fact about Craig is that he has covered the majority of the counties in Maine with his work as an Epidemiologist.

Prior to joining Maine CDC, Craig worked as a compliance specialist for medical patients for 4 years.

In his free time, Craig enjoys being outdoors - especially with his dog, Penny, or when he's out ATVing and snowmobiling in the winter.

Enjoy a photo of Craig's beloved pup!

The York District Public Health Council (YDPHC) will hold their quarterly meeting virtually on Zoom June 12th from 9am - 10:30am

The agenda is available attached with this newsletter.

If you would like an Outlook calendar invitation, please email: Emilee.Caradonna@Maine.gov

HAZARD VULNERABILITY ANALYSIS

The York District Healthcare Coalition recently held a Hazard Vulnerability Analysis with its various healthcare and emergency management partners. A Hazard Vulnerability Analysis (HVA) is a systematic tool that helps identify and prioritize potential hazards and risks that could impact a facility or community.

HVAs can help organizations and facilities allocate resources to the most likely or severe incidents based on a calculated risk scale. HVAs can also help organizations develop documentation for accrediting organizations, comply with conditions of participation, and score emergency preparedness.

VIBRIOSIS IN YORK DISTRICT:

Stemming from a need for more education on *Vibrio* - the Public Health Unit and the Infectious Disease Epidemiology team worked together to create a York District-specific flyer around vibriosis.

Please share the version as attached with this newsletter with partners!
